

11th ASTT No-Dig

The No-Dig Downunder Conference and Exhibition will be held at the Gold Coast in September this year.

HMI will have a range of HDD products on display including Reamers, Swivels, Towing Heads and the newest addition to our range the R8 Hole Opener.

The R8 is a unique product with hardfaced arms designed to work as stabilisers, preferred by clients for large diameter rock drilling jobs. With replaceable arms, TCI cutters and bearings, and three cutting sizes per opener, these hole openers are the most versatile, cost effective hole opener for hard rock HDD.
